BAB I INTRODUCTION

01

Topic

02

Background

03

Purpose

BAB I

INTRODUCTION

Topic : Prediksi Harga Komoditi Pertanian Jagung

Background:

- The background to choosing this topic is because many farmers or traders (tokke) have difficulty finding information about corn prices and knowing the latest prices from year to year.
- Farmers or traders often have to visit corn providers directly to obtain price information and sell corn to traders. This process takes a long time and makes it difficult for farmers to find traders who will buy their corn. Additionally, service providers may not always be present at the required location.

BAB I INTRODUCTION

Objectives

- Providing Accurate and Latest Price Information: Providing real-time corn price data that can be accessed by farmers and traders to help them make better and timely decisions.
- Increase Transaction Efficiency: Simplify the process of selling and purchasing corn by reducing the need for physical interaction between farmers and traders, thereby saving time and costs.

BAB 2

System Overview

01

Current System

02

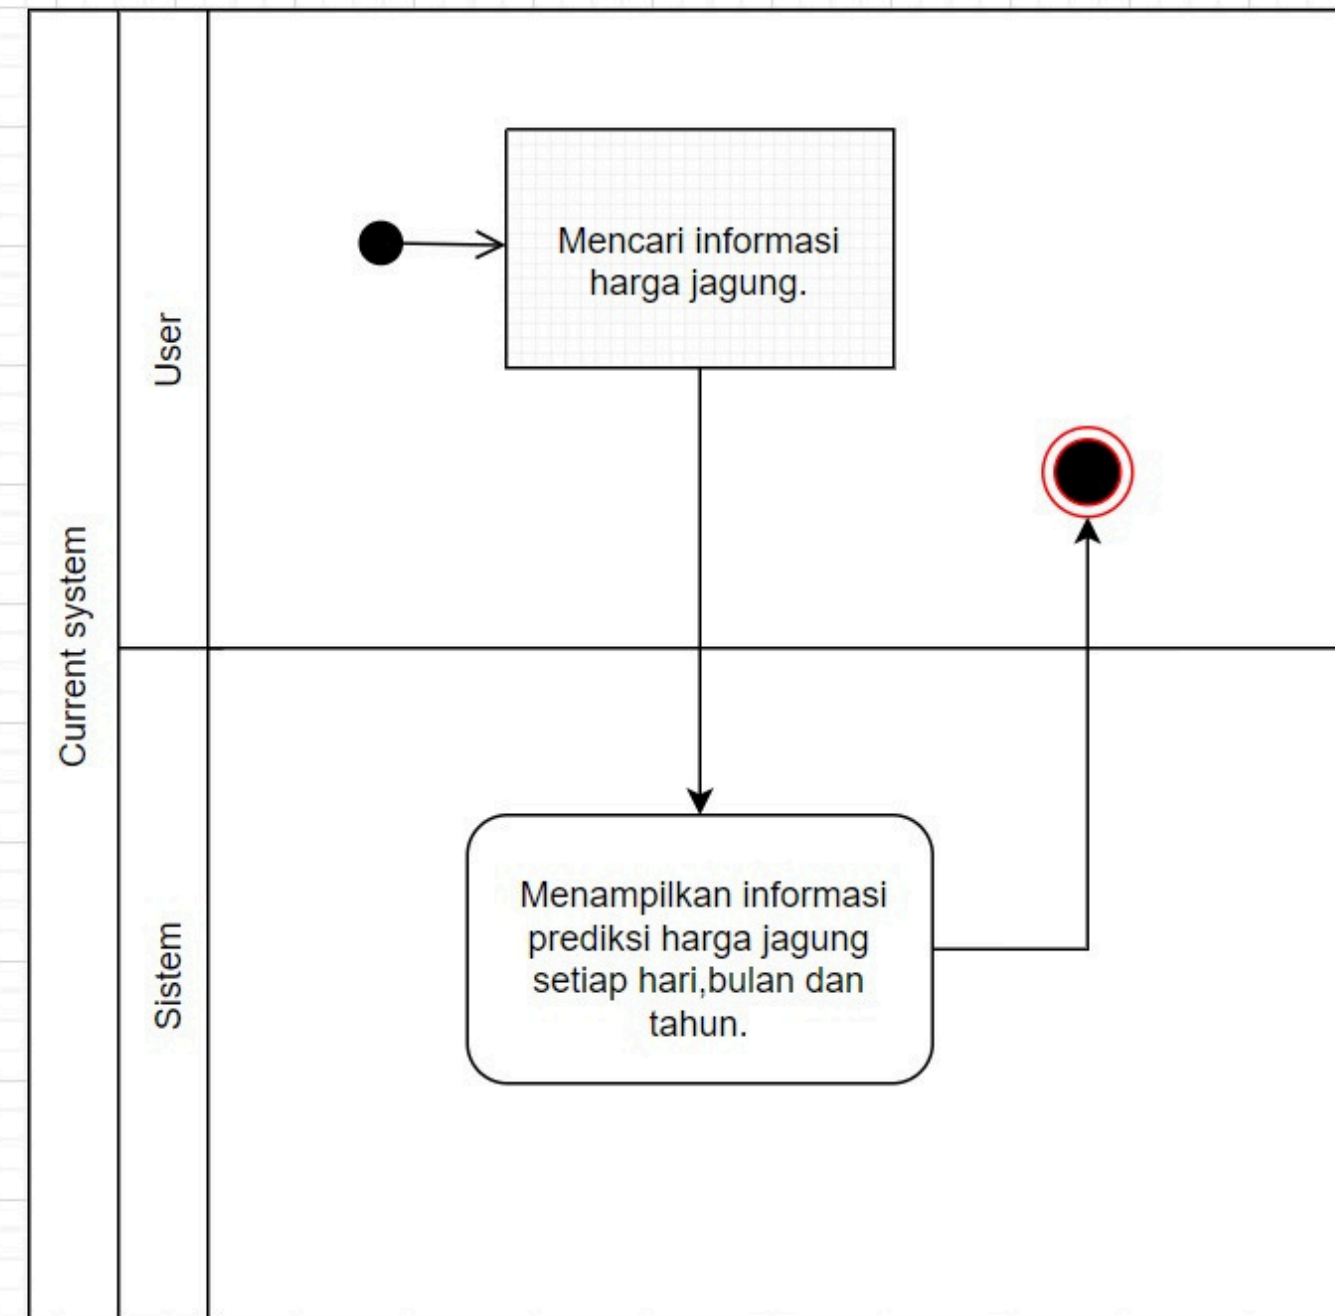

Target System

BAB 2

System Overview

Currnet system

- In this section, the current business processes of the existing system will be explained, which involves users searching for corn information systems

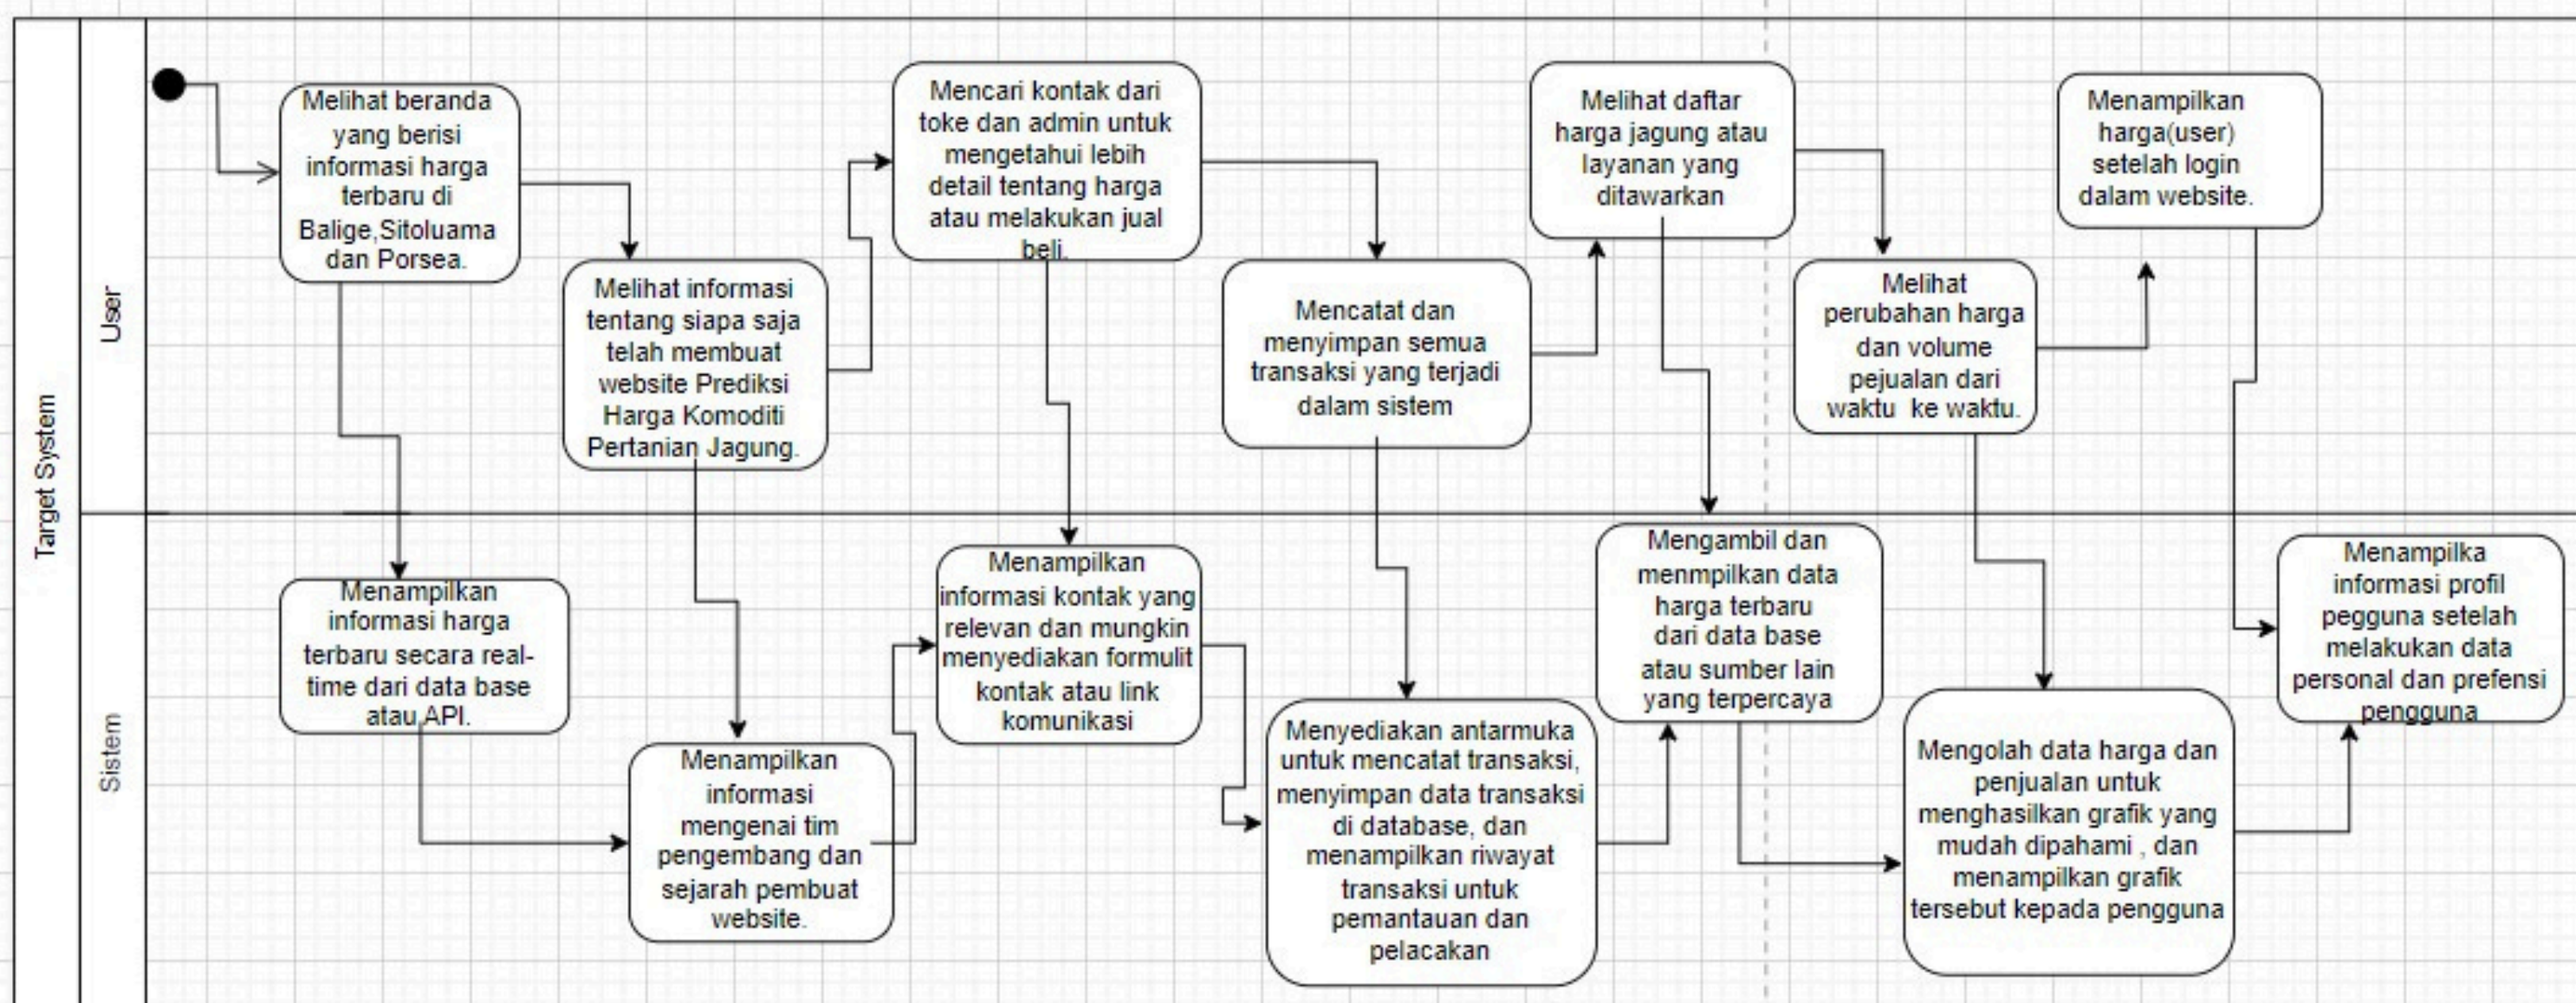

BAB 2

System Overview

Target System

- In this section, the current business processes of the existing system will be explained, which involves Farmers (Users) who make sales

BAB 2

System Overview

Target System

Based on the obstacles faced in the previous system, the most appropriate solution is to develop a website or information system that will be used by farmers and the people of Toba Regency, especially Balige, Laguboti and Porsea.

The proposed website will provide benefits for both farmers and the community by simplifying the price prediction process for corn agricultural commodities, including enabling direct communication through the system. With this information system, farmers can obtain accurate and up-to-date price prediction information, so they can plan production and sales better. On the other hand, the public and potential buyers will get access to transparent price information, so they can make wiser purchasing decisions.

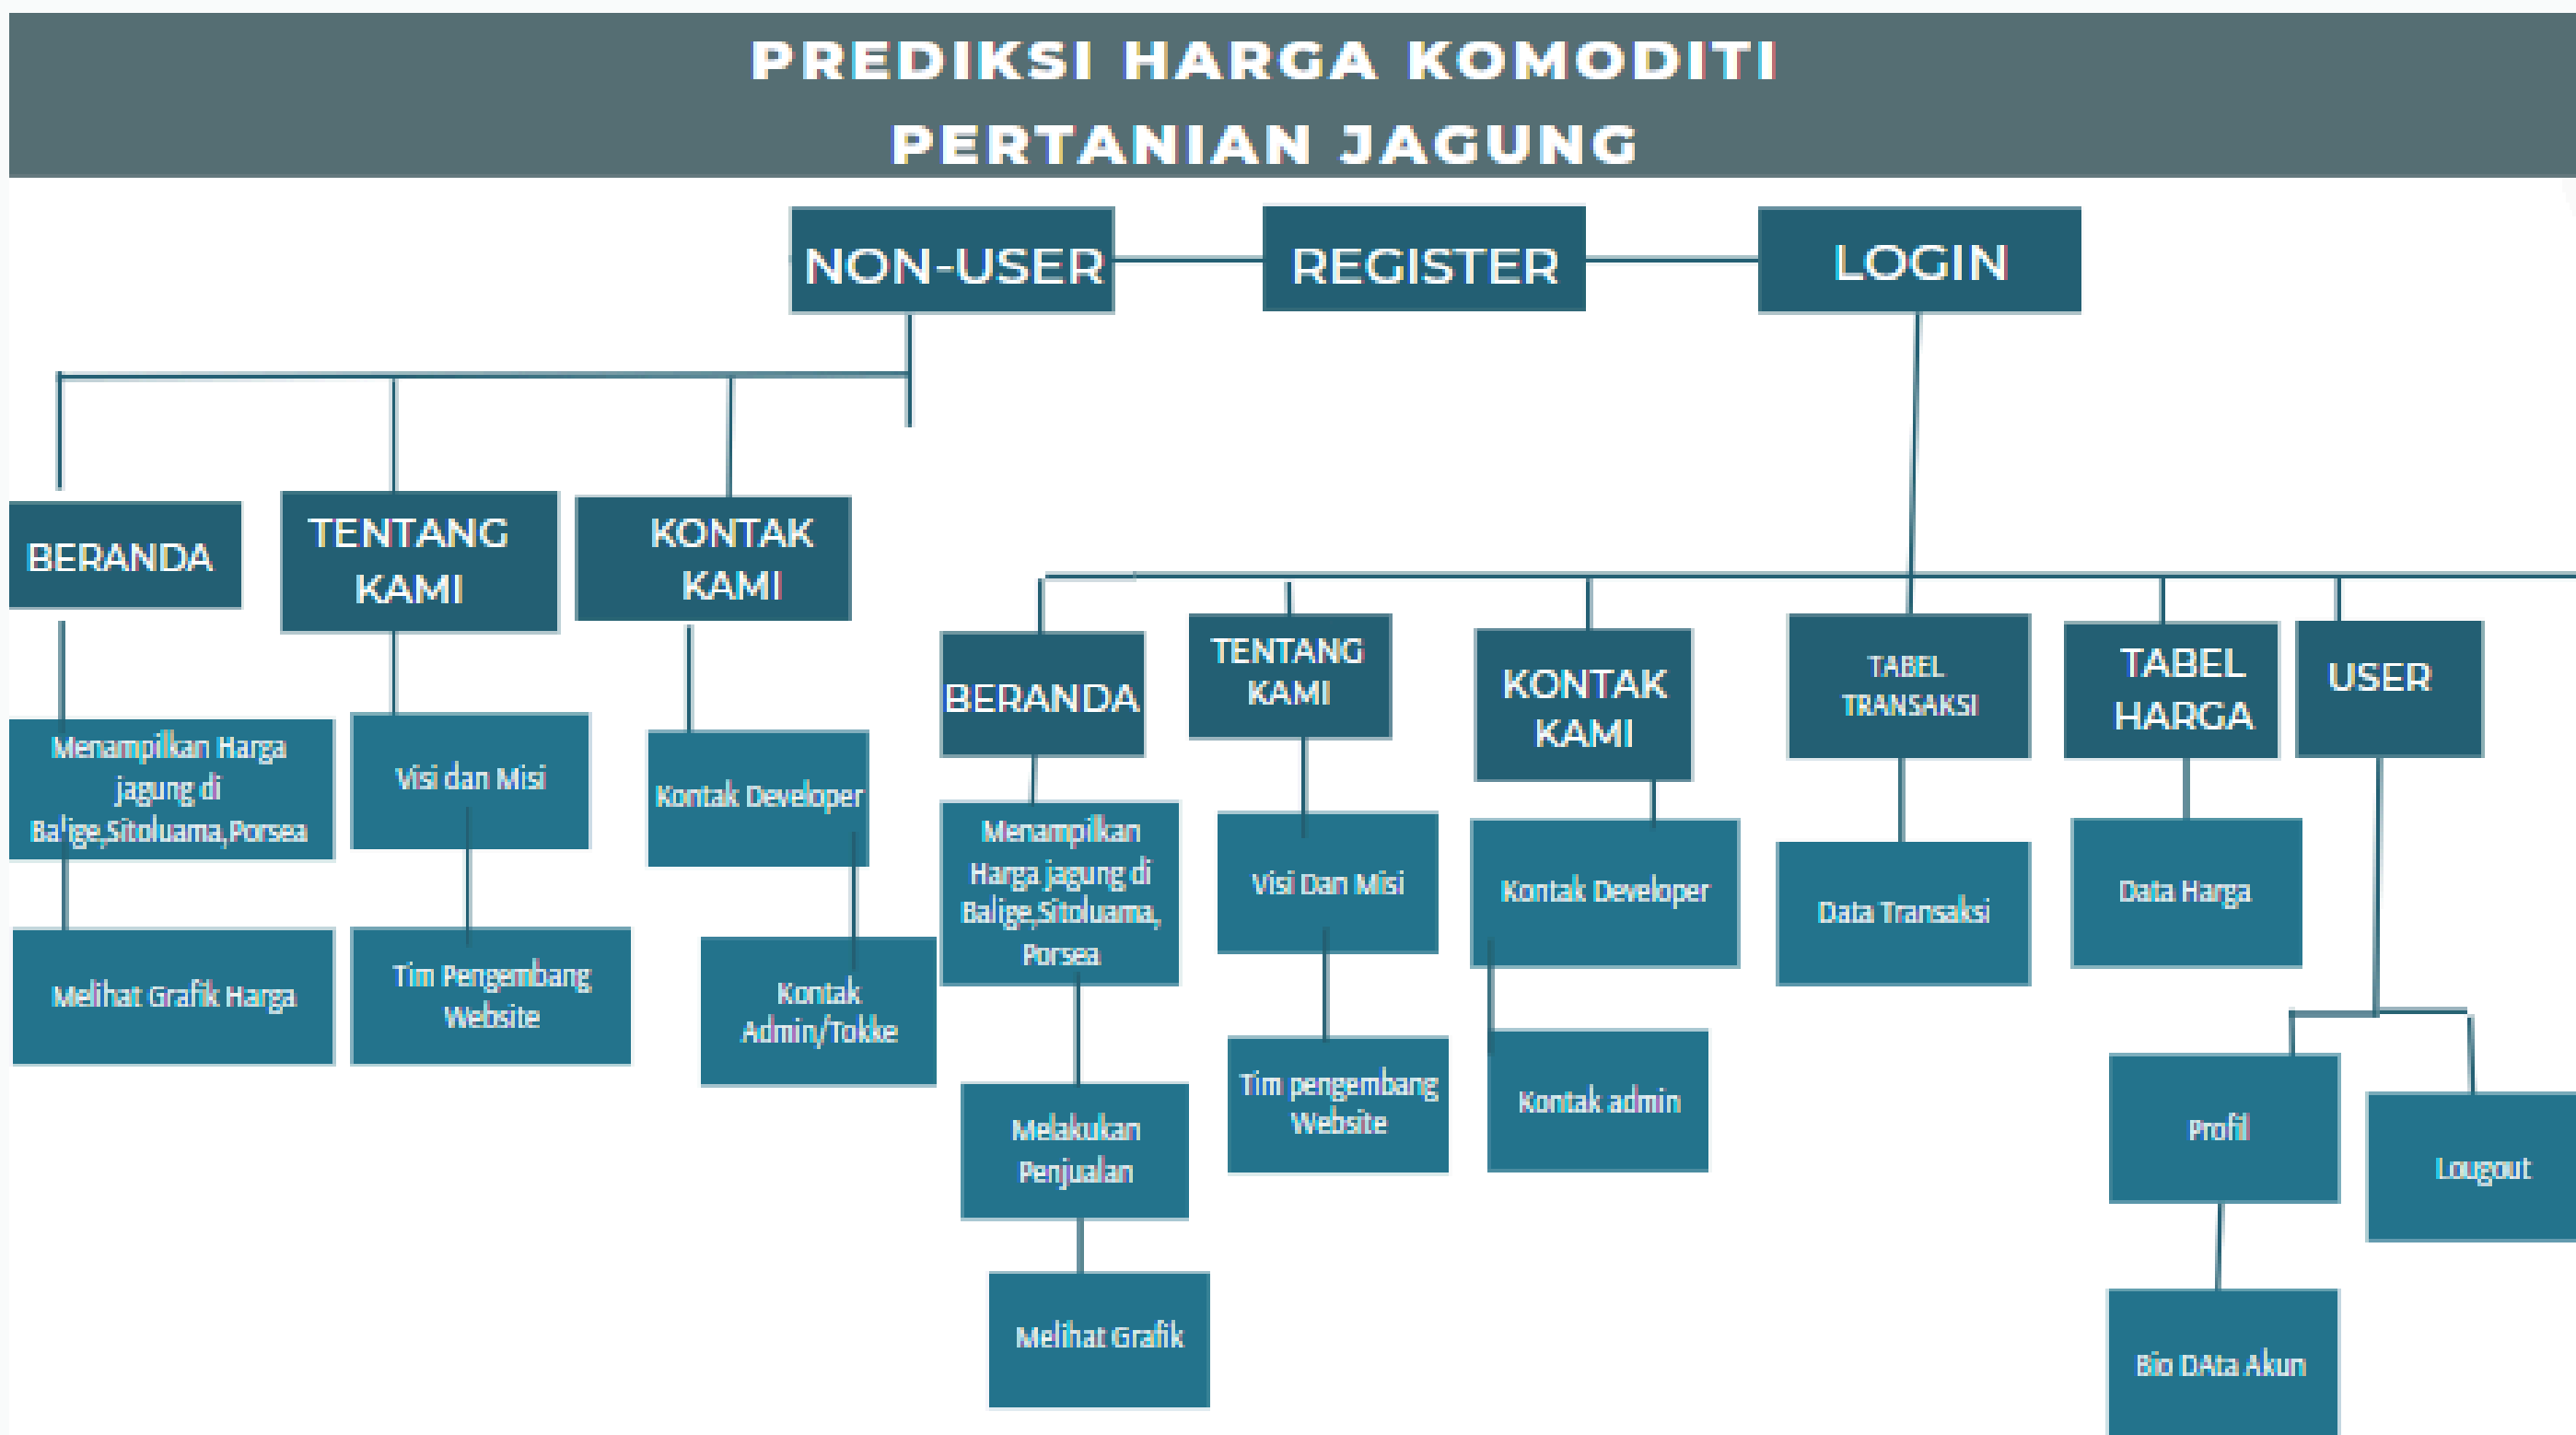

In addition, this system will be equipped with a graphic feature that can be seen by farmers, which displays corn price trends over time. These charts will help farmers to understand price fluctuations and predict future prices based on historical data.

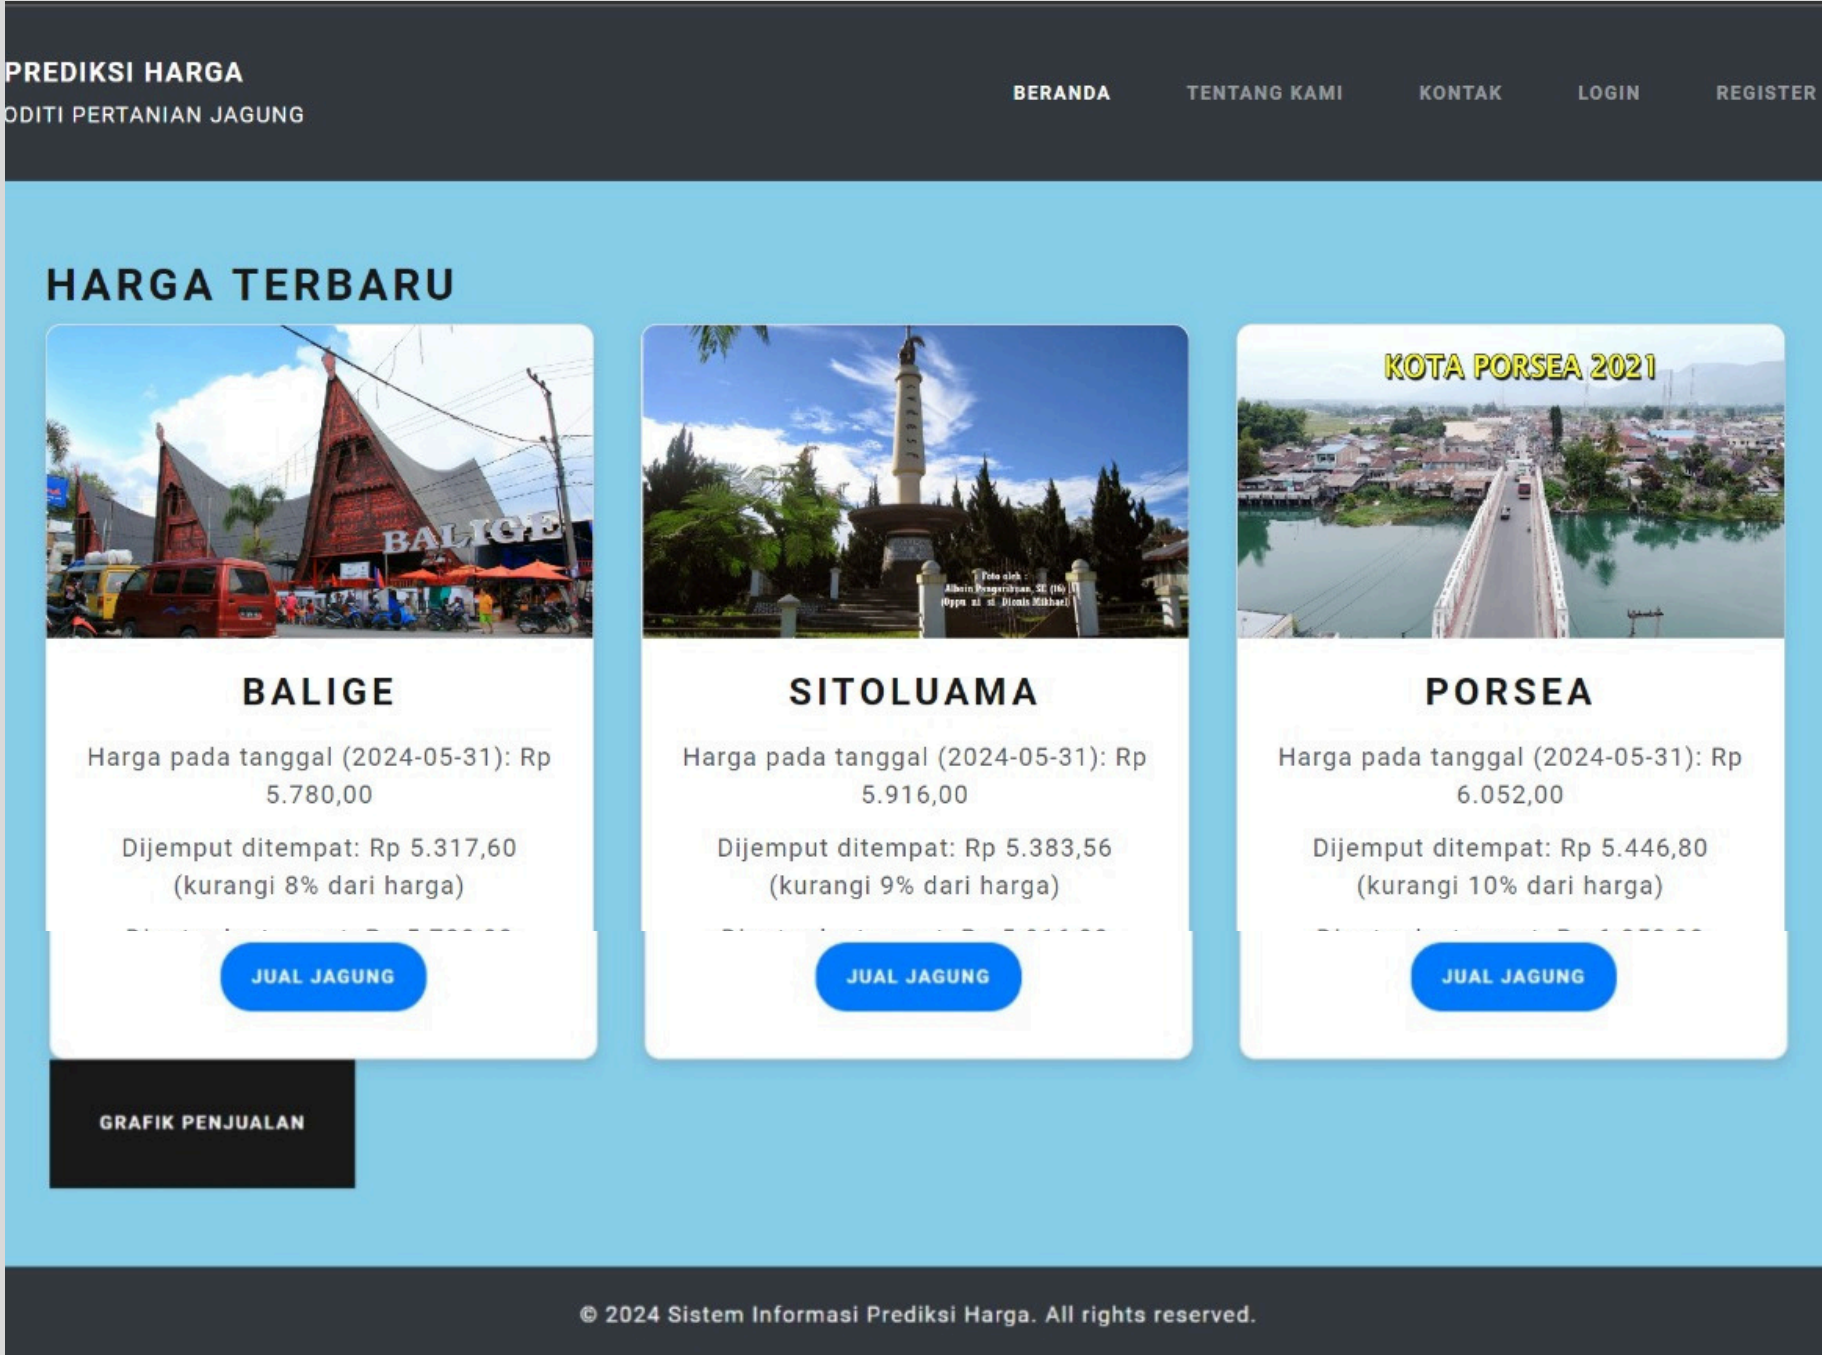

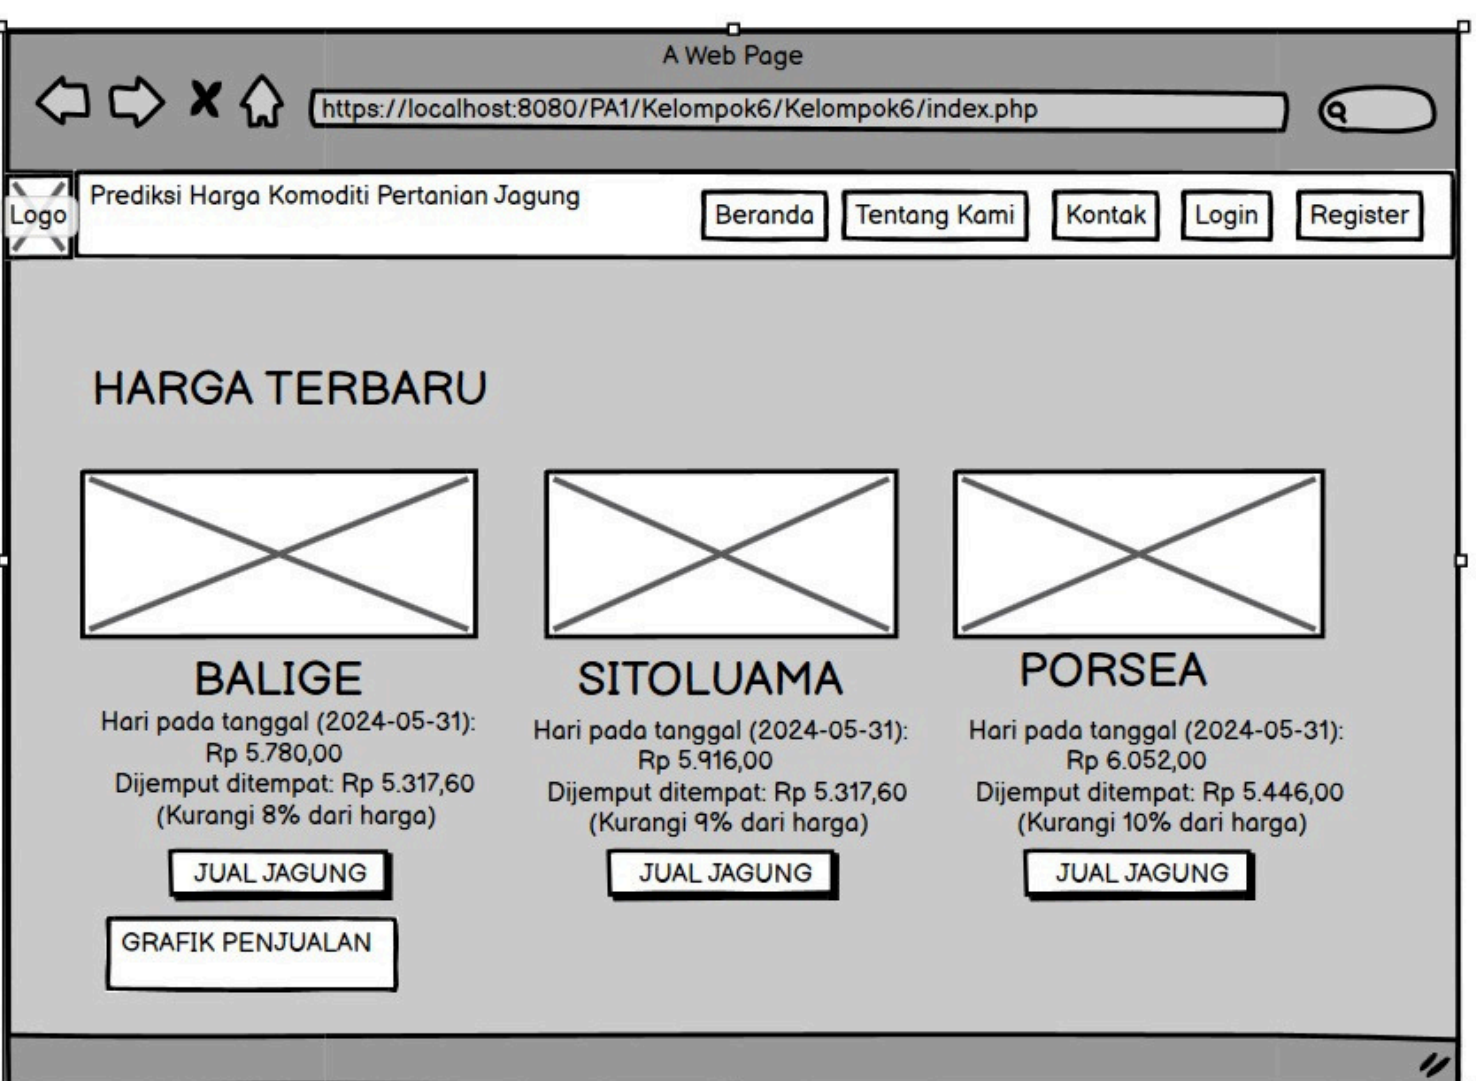

Not only that, another feature that will be provided is the ability for farmers to sell their corn directly to collectors (tokke) through the system. This feature will facilitate direct buying and selling transactions and reduce unnecessary intermediaries, so farmers can get better prices for their products.

Thus, it is hoped that this information system can improve the welfare of farmers and support overall regional economic development.

DEMO WEBSITE

The image features a dark blue background with a central horizontal brushstroke in a slightly lighter shade of blue. The text "Thank You" is centered in a white, bold, rounded font. Four white-outlined circles of varying sizes are arranged around the text: one large circle on the left, one medium circle on the right, and two smaller circles at the bottom left and top right. In the top-left and bottom-right corners, there are white, stylized wavy lines that resemble decorative borders or smoke.

Thank You
